

Standard and custom Hirth couplings from Transatlantic Connection and Diviprec

Standard Hirth couplings from 50 to 1000 mm

Special Hirth couplings per customer drawings

Custom 3-piece Hirth couplings

Diviprec manufactures Hirth couplings in all standard diameters from 50 to 1,000 mm, and with 24 to 720 teeth (depending on the diameter). Diviprec also routinely manufactures custom couplings per customer drawings, including 3 piece couplings and diameters up to 1,150 mm. All couplings come with a certificate showing the actual dimensions.

Diviprec only produces Hirth couplings. Delivery time is fast, many standard sizes are available from stock, the quality is excellent, and we believe our prices are unbeatable. In fact, Diviprec is the actual manufacturer of some well-known German Hirth coupling brands!

Diviprec's state-of-the-art manufacturing plant is located in the Northern industrial belt of Spain's Basque region, the center of the growing Spanish machine tool industry.

If you need Hirth couplings or a Hirth coupling-style product, please send a drawing or refer to the dimensions for standard sizes in 7.30.11.1-2. Please contact Transatlantic Connection for additional information on calculation formulas for sizing.
