

Used for locking and releasing or dismantling KS clamping cartridges (standard and high pressure clamping cartridges). The assembly gripper makes insertion and removal of the clamping grippers, even on multi-spindle heads, an easy operation.

Note

Locking and releasing of the clamping cartridge is made easier by using an extension piece which is inserted into hole D3.

Extension piece not included.

Available for HSK-C 32, 40, 50, 63, 80, 100
